

Crosslake Fibre to Transform UK and France Connectivity on PlatformDIGITAL® With New CrossChannel Fibre System

July 1, 2021

- Selects Interxion: A Digital Realty Company to enable new open interconnection options for financial, wholesale, large enterprise and cloud customers in the UK and France
- 520km cable is first fibre-optic subsea cable to be built across English Channel in two decades
- Provides lowest latency and a wholly diverse route between Paris and the UK extending the global scale of PlatformDIGITAL® to enable connected data communities

PARIS, July 1, 2021 /PRNewswire/ -- [Interxion](#): A Digital Realty Company ([NYSE: DLR](#)) and leading European provider of carrier- and cloud-neutral colocation data centre solutions, has been chosen by [Crosslake Fibre](#) to enable direct interconnection from Interxion's [Paris Campus](#) to the [CrossChannel Fibre System](#), which is expected to be operational by the end of the 2021.

Interxion's Paris campus is one of the world's leading digital business hubs comprising seven data centres, and is currently undergoing major expansion with the construction of the [Interxion Paris Digital Park](#). It will provide a landing point for subsea cables, such as the CrossChannel Fibre System, that will help businesses interact more easily between the UK and mainland Europe. Interxion customers in all Paris data centres will be able to interconnect seamlessly to the CrossChannel Fibre System following its anticipated activation by the end of 2021.

The CrossChannel Fibre System is the first new subsea cable to be built across the English Channel in nearly twenty years, providing users with an ultra low latency and geographically diverse interconnection between Paris and the UK.

The high fibre count, non-repeated system will contain 96 fibre pairs, each providing over 20 terabits per second of capacity. The CrossChannel Fibre System's enhanced technical solution will lower operating costs, bringing significant added value to Digital Realty's global platform PlatformDIGITAL® and enabling connected data communities across the globe.

"Interxion's Paris data centres are home to a thriving community of networks, enterprises, content providers, as well as financial, gaming, and media companies that will all benefit from the CrossChannel Fibre System's diverse routing, high capacity and low latency," explains Fergus Innes, Senior Vice President at Crosslake Fibre.

"The CrossChannel Fibre System will provide the shortest path between Paris and the UK, a critical benefit for our latency sensitive customers. In addition, the system follows a new, physically separate route from Paris to the UK, enabling our customers to enhance the resilience of their networks and efficiently overcome data gravity challenges," says Mike Hollands, Senior Director, Market Development at Digital Realty.

The most recent Data Gravity Index DGx™ – which measures the creation, aggregation and private exchange of enterprise data across 53 global metros – revealed that London and Paris are among the cities with the greatest intensity of data gravity in the world, along with Amsterdam, Dublin and Frankfurt in Europe. Data Gravity is the phenomenon of large amounts of data attracting more data and applications into the same place. Cities with strong, open data exchange with other cities often generate the greatest intensity of Data Gravity – bringing major strategic advantages to businesses in those cities.

"The CrossChannel Fibre System will alleviate the effect of being weighed down by data gravity, by opening up a new route for data to move efficiently between businesses. This is particularly important for London and Paris as, according to the Data Gravity Index DGx™, London and Paris are one of the world's most interconnected city pairings – coming in second after London and Amsterdam," concludes Hollands.
